SKILLS

- Languages** : C++, Java, C, Python, TypeScript
- Frameworks/Technologies**: Next.js, React, Streamlit, HTML, CSS
- Databases/Tools** : SQLite, MySQL, SQL Server, Git, GitHub, VS Code
- Concepts** : DSA, OOP, SQL, REST APIs

EXPERIENCE

Enlab — Software Developer | Founding Team

2026

Agentic CLI IDE and AI bench assistant for embedded development teams.

- Built parsers for STM32Cube, PlatformIO, Arduino, ESP-IDF, and Zephyr project and configuration files.
- Normalized target hardware, frameworks, dependencies, build settings, and flash/debug configuration into structured context for AI tools.
- Developed PCB utilities for component selection, pin and footprint compatibility, and manufacturer-rule validation.
- Connected project context to the agentic CLI for environment-aware setup, code generation, building, flashing, and debugging.

PROJECTS

Engineering Loop [\[GitHub\]](#) — Execution-First Workflow

April – July 2026

- Built an execution-first workflow that carries coding tasks through planning, implementation, real verification, checker review, and evidence-backed completion.
- Added bounded resume state and Codebase Memory-first discovery so engineers can continue long work without loading full conversation history.
- Bound verification evidence to the Git workspace, invalidating stale proof when tracked or untracked files change.

Stocklane [\[GitHub\]](#) — Inventory and Order Reservation

January 2026

- Built an inventory and order-reservation application that prevents different orders from promising the same available stock.
- Used an atomic SQLite transaction to validate every quantity and reserve an order only when all items have sufficient stock.
- Developed a responsive Next.js interface for reservation, fulfilment, and cancellation with persistent inventory updates.

Credit Risk Explorer [\[GitHub\]](#)

November 2025

- Built an interactive application that validates eight applicant and loan inputs and returns a relative risk score, band, and review flag.
- Connected the Streamlit form to one saved preprocessing and XGBoost pipeline for consistent training and inference.
- Added clear missing-model and invalid-input errors plus nine tests covering data, model, and UI behavior.

CERTIFICATES

- Dynamic Programming, Greedy Algorithms — University of Colorado Boulder ([Coursera](#))

April 2024
- Algorithms on Strings — University of California San Diego ([Coursera](#))

February 2024
- AI Agents and Agentic AI Architecture in Python — Vanderbilt University ([Coursera](#))

August 2025
- Approximation Algorithms and Linear Programming — University of Colorado Boulder ([Coursera](#))

May 2024

ACHIEVEMENTS

- Won LPU Innotek 2026**

April 2026

Won LPU Innotek 2026 in the Department of Student Research and Project.
- Featured on LPU’s Official Social-Media Channels**

June 2026

Represented a student-led product and presented its core features and value proposition.

EDUCATION

- Lovely Professional University**

Punjab, India

Bachelor of Technology - Computer Science and Engineering; **CGPA: 7.87**

August 2022 – May 2026
